Q: What is the main difference between Diastatic and Non-Diastatic Organic Malt Syrup?

A: **Diastatic Organic Malt Syrup** contains active enzymes (amylase) that can break down starches into sugars, making it ideal for baking (to aid fermentation and crust development) and brewing. **Non-Diastatic Organic Malt Syrup** has had its enzymes denatured (inactivated) through heat, so it’s used purely for its sweetness, flavor, color, and functional properties like binding and humectancy, without affecting fermentation rates.

Q: Is Organic Malt Syrup gluten-free?

A: Typically, **Organic Malt Syrup** is derived from **barley**, which contains gluten. Therefore, it is generally **not considered gluten-free**. If a gluten-free option is required, please inquire about our specialized organic malt syrups derived from gluten-free grains like rice or corn.

Q: What's the typical shelf life and recommended storage for bulk quantities?

A: Our **Organic Malt Syrup** typically has a shelf life of **12-24 months** from the manufacturing date when stored in a cool, dry place, away from direct sunlight and extreme temperatures, in its original sealed containers.

Q: How does Organic Malt Syrup compare in sweetness to sugar (sucrose)?

A: **Organic Malt Syrup** is less sweet than sucrose, typically ranging from **30% to 60% of sucrose's sweetness**, depending on the specific grade and composition of sugars. This allows for a more balanced flavor profile in finished products.

Q: Can Organic Malt Syrup be used as a natural browning agent?

A: Yes, **Organic Malt Syrup** is an excellent **natural browning agent**. Its high content of reducing sugars (like maltose and glucose) readily participates in the Maillard reaction during heating, contributing to desirable golden-brown crusts and rich flavors in baked goods and other cooked applications.
